Biography, research interests and outputs

Graduated in 1998 from the University Blaise Pascal of Clermont-Ferrand (France) with a master in Cognitive Processes & Social Psychology, I have completed a PhD in 2003 at the same university. My work was part of the French CNRS National Research Group from which I obtained a junior research officer position from 1998 to 2001. During the last two years of my Ph. D, I was also a full-time lecturer in Psychology at the University of Le Havre (France). After this, I was research fellow at the Augusta State University (Georgia, USA) from October 2004 to March 2005. Subsequently, from October 2005 to June 2007, I was research fellow at the University of Essex (UK) and from July 2007 to November 2011 at the University of Milan-Bicocca (Italy).

My main research interests are focused broadly on the study of deliberative and automatic processes involved in social cognition. Within the university of Milan-Bicocca, I am part of the research group PsychoSCoPe (Psychometrics of Social Cognition and Personality, <http://psychoscope.psico.unimib.it>) that focuses on measurement and underlying processes of implicit and explicit preferences and dispositions. Over the years, I investigated several aspects of measures of implicit cognition based on reaction times to cognitive tasks, with a particular interest on predictive validity in different domains, such as food consumption or aggression. In the last years, I have been also involved in a series of projects that aim at changing implicit and explicit attitudes through Evaluative Learning. I also focused on measures of explicit cognition, especially the ones used in attitude and dual models. I have applied and tested various models of decision making in the context of attitude theory and social cognition. I am also part of the research group ECliPPs (Experimental Clinical & Personality Psychology) that focuses on investigating social cognition processes involved in different personality pathologies. Over the years, I have established various collaborations with psychology colleagues from different countries and with scientists from different disciplines (e.g., economy, medicine). From these different research projects, I have published more than 30 articles in international peer-reviewed journals. I am a reviewer for more than 20 international scientific journals. I have also experience in PhD supervision.
